

Javascript String replace()

```
let str = "This is Java.";
```

The replace() method returns a new string with the specified string/regex replaced.

....replace Java with Javascript

```
let result = str.replace('Java', 'Javascript');  
console.log(result);
```

Output - **This is Javascript.**

Piyushd_21

....show me the Syntax and explain
each term present in it

Here, str is a
string.

pattern - string/regex to be
replaced

```
str.replace(pattern, replacement)
```

replacement - pattern is replaced
with this replacement

Piyushd_21

....how can I replace first occurrence
of the pattern

```
const str = "This is Java and Java is the best."
```

String as First Occurrence -

```
let pattern = "Java";  
let result = str.replace(pattern, "JavaScript");  
console.log(result);
```

Output -

**This is JavaScript
and Java is the
best.**

Regex as First Occurrence -

```
let pattern = /Java/;  
let result = str.replace(pattern, "JavaScript");  
console.log(result);
```

Output -

**This is JavaScript
and Java is the
best.**

Piyushd_21

....how can I replace all the occurrences of the pattern

```
const str = "This is Java and Java is the best."
```

We need to use Regex with g switch

```
let pattern = /Java/g; //global search
let result = str.replace(pattern, "JavaScript");
console.log(result);
```

Output -

**This is JavaScript
and JavaScript is
the best.**

Piyushd_21

....now tell me how can I replace occurrences without considering Uppercase/Lowercase

```
const str = "javaSCRIPT JavaScript";
```

All occurrences replaced -

```
let pattern = /javascript/gi; // case-insensitive and global search
let result = str.replace(pattern, "JS");
console.log(result);
```

Output - **JS JS**

Note - To replace only First Occurrence
just remove g from the Regex

Piyushd_21

....how can I pass a function as a replacement

```
const str = "Random digit: 2";
```

```
function generateRandomDigit() {  
  return Math.floor(Math.random() * 10);  
}
```

Function - Generates a random digit between 0 and 9

```
let pattern = /\d/; //Regex to match a digit  
let result = str.replace(pattern, generateRandomDigit);  
console.log(result);
```

Output - Random digit : 4

Note - Every time a new number will be there in the output
